

Why Study Biology?

Because scientists get to do things in lab that are illegal in your garage!

Did You Know...?

- Whales were once land mammals that moved to the sea and adapted to marine life (genetically, they are related to bears!)
- The human heart has enough pressure to squirt blood up to 30 feet away.
- The human femur (thigh bone) is stronger than concrete.

Discover More – Discover Biology!

Currently, there is a great economic need for workers with college degrees in Biology – in and out of the research lab!

Check out the many (legal!) career paths to which a Biology degree can lead you!

Forensic Investigator

Doctor/Nurse/P.A.

Forensic Scientist

FDA/USDA Enforcer

Environmental Technician

Writer for *National Geographic* or

Pharmaceutical Marketing

The Discovery Channel

Biotechnology

Research Scientist

Teaching

and much, much more!
